OTT TITANS · RIDDLE VAULT

THE ICE-WATER DATE

WHY DID ONLY HE DIE?

THE CASE IN ONE LINE
Same jug. Same ice. Five glasses for her, one for him — and only one funeral.

CASE 10 · ONE RIDDLE · ONE ANSWER · NO SHORTCUTS

© 2026 OTT TITANS · ALL RIGHTS OWNED BY OTT TITANS

THE CASE

On the hottest day of the year, a man and a woman sit down for a first date. The waiter brings a jug of water and a bucket of ice, and keeps both their glasses filled from the same jug and the same bucket.

Thirsty, the woman gulps down five glasses of ice water, one after another, in a few minutes. The man nurses a single glass, sipping it slowly for nearly an hour in the heat.

That evening, the man is dead — poisoned. The woman is completely unharmed. The water in the jug, tested later, is clean. Same water, same ice, same table.

THE QUESTION

Where was the poison?

THREE HINTS

Open them one at a time. Stop the moment you have it — the last hint nearly gives it away.

HINT 1
The water is cleared by the test — believe it. Look at what else was in the glass.

HINT 2
One of them drank fast; the other drank slowly. In that heat, what changes inside a glass given time?

HINT 3
Something in the glass was not liquid when it went in. Think about what it becomes as it sits in the sun.

YOUR MOVE

Where was the poison?

Decide your answer now — say it out loud or write it in the comments — before you turn this page. No going back.

THE REVEAL

THE ANSWER

The poison was frozen inside the ice cubes.

The woman drank each glass so fast that her ice barely had time to melt — almost no poison ever entered her water. Glass after glass, the cubes left nearly whole.

The man sipped slowly for nearly an hour. His ice melted completely into his drink, releasing the full dose, cube by cube, into the one glass he finished. Same jug, same bucket — the difference was time, and how much ice each of them let melt.

WHY IT WORKS

Every shared element is a controlled variable: same jug, same bucket, same table. The story varies exactly one thing — drinking speed — and the mechanism (melting) converts that one difference into opposite outcomes.

That is why the case is watertight: any theory involving the water fails the woman's five glasses; any theory involving the ice must explain why hers spared her. Melting explains both with a single move.

THE TRAP, NAMED

The five glasses. They make the woman look like the one in danger, so the mind searches for what protected her — instead of asking what time did to his one glass.

MAKE THE VIDEO

This book is a production pack. The route from page to posted video:

1 · OPEN THE BOOK
The story, the question and the reveal in this book are your script beats, in order.

2 · GIVE IT TO THE AGENT
Paste the case into your AI agent (run it on Google Antigravity) and let it plan the shots from the beats.

3 · CONNECT GOOGLE FLOW
The agent builds the scenes as short clips in Flow. Keep the question on screen until the final seconds — the reveal is the last beat, never the first.

4 · EDIT + POST
Post with the question as the caption's first line and pin a comment asking for answers BEFORE the reveal. The debate in the comments is the engine.

ABOUT THIS BOOK

RIDDLE VAULT is the OTT Titans series of one-riddle books: one case per book, a verified answer, and the production route to turn it into a video. Every answer in this series is solved and checked before the book is made — if the logic has a hole, the riddle does not ship.

OWNERSHIP

This book — its text, structure and design — is owned by OTT TITANS. Reading or downloading it grants you the right to enjoy it and to produce your own version of the riddle video on your own channels. It never transfers ownership of the book.

More cases are waiting in the Vault — and a new riddle video lands every day on the 1 Minute Detective channels.
