THE HUNDRED DOORS

ONLY TEN STAY OPEN

THE CASE IN ONE LINE
A hundred doors, a hundred passes — and a pattern hiding in the divisor counts.

THE COMPLETE PRODUCTION PACK — STORY · SCRIPT · NARRATION · EVERY PROMPT

WHAT'S INSIDE

One riddle, taken all the way from story to posted video. Every page does one job.

THE CASE
the story, exactly as the viewer hears it

THE QUESTION + THREE HINTS
the hook and the ladder

YOUR MOVE
the pause page — where comments are born

THE REVEAL + WHY IT WORKS
the verified answer, watertight

THE TRAP + COMMENT ENGINEERING
why brains fail it, and how the debate is seeded

CHARACTER & STYLE LOCK
the designs that never change

REFERENCE IMAGE PROMPTS
the stills to generate first

VIDEO PROMPTS 1-6
one clip per page, narration inside each

AGENT MASTER PROMPT
the one prompt that runs the build

NARRATION SCRIPT
every line, in order, with timing

THUMBNAIL
the cover frame that earns the tap

POSTING COPY
titles, caption, pinned comment

EDIT CHECKLIST
the checks before anything posts

AI — WHO DOES WHAT
every step, and whose job it is

THE CASE

A long corridor holds 100 doors, all closed. A first person walks the corridor and opens every door.

A second person walks it and toggles every second door — opening it if closed, closing it if open. A third person toggles every third door. The pattern continues: the k-th person toggles every k-th door, until the hundredth person toggles only door 100.

When every pass is done, some doors stand open and the rest are shut. The arrangement is not random — it is perfectly determined, and surprisingly sparse.

THE QUESTION

Which doors are left open at the end?

THE QUESTION + THREE HINTS

Open them one at a time. Stop the moment you have it — the last hint nearly gives it away.

THE QUESTION

Which doors are left open at the end?

HINT 1

Follow one door. Door 12 is touched by persons 1, 2, 3, 4, 6 and 12 — what do those numbers have in common with 12?

HINT 2

A door ends open exactly when it is toggled an odd number of times. Count the toggles, not the door.

HINT 3

Most numbers' divisors pair up neatly. A few numbers have one divisor that pairs with itself.

YOUR MOVE

Which doors are left open at the end?

Decide your answer now — say it out loud or drop it in the comments — before you turn this page. No going back.

THE REVEAL

THE ANSWER

The ten perfect-square doors: 1, 4, 9, 16, 25, 36, 49, 64, 81 and 100.

A door is toggled once for each divisor of its number. Door 12 has six divisors (1, 2, 3, 4, 6, 12) — six toggles, an even count, so it ends closed. Most numbers behave this way, because divisors arrive in pairs: 12 = 1×12 = 2×6 = 3×4.

Perfect squares break the pairing: for 36, the divisor 6 pairs with itself (6×6), giving an odd count of divisors — an odd number of toggles — and the door ends open. Between 1 and 100 there are exactly ten squares, so exactly ten doors stand open.

WHY IT WORKS

The corridor is a machine for counting divisors, and the parity of the divisor count is the whole answer. Even: closed. Odd: open. Squares are the only numbers with odd divisor counts.

It is the wolves-and-sheep lesson in another costume: simulate nothing. Find the invariant — here, pairing — and the hundred passes collapse into one line of reasoning.

THE TRAP + COMMENT ENGINEERING

THE TRAP, NAMED
Trying to track the corridor pass by pass, or guessing 'half of them'. The state of a hundred doors is un-trackable by hand and irrelevant — only each door's divisor count matters.

This riddle is built to split the comments into two camps. Seed both, then let them argue:

CAMP A SAYS
Team HALF: 'A hundred passes flip things so often it must even out — about half the doors end open. Fifty, give or take.'

CAMP B SAYS
Team SQUARES: 'A door ends open when its number has an odd count of divisors. Only squares qualify. Ten doors.'

PIN THIS COMMENT
Your call BEFORE the reveal: how many doors stay open — and can you name even one of them?

CHARACTER & STYLE LOCK

[VAULT-2D] STYLE LOCK — flat 2D storybook animation, deep-navy night palette with one lime accent, clean shapes, soft moonlight, no text inside the picture except where a prompt says so, vertical 9:16. Characters never change design between clips: generate the reference stills first, then build every clip from them.

LOCK
Doors are identical plain wood with round knobs; every door number is drawn in editing. A generated number anywhere in the frame fails the clip.

LOCK
The final shot is a story fact: exactly ten open doors, at the square positions, glowing softly. Count them in the frame check — no more, no fewer.

LOCK
The corridor's perspective and lighting never change between the first and final shots, so the transformation reads as pure pattern.

Never redesign a locked character mid-video. If a generation drifts, regenerate the still — never accept a near-match.

REFERENCE IMAGE PROMPTS

Generate these stills first, in this order, and check each one before any video clip is made.

REF 1
REF-CORRIDOR: flat 2D storybook illustration, vertical 9:16, a long corridor of identical closed doors receding into darkness, deep navy palette, one warm light at the far end, no numbers or text.

REF 2
REF-DOOR: one closed corridor door alone on a plain deep-navy background, flat 2D storybook style, plain wood with a round knob, centred, no number, no text.

REF 3
REF-TILES: flat 2D storybook illustration, vertical 9:16, two neat rows of plain square tiles on a dark surface, one row paired off and one single tile standing apart, soft spotlight, no numbers or text.

REF 4
REF-FINAL: flat 2D storybook illustration, vertical 9:16, the same long corridor with exactly ten doors standing open and glowing softly at widening intervals, the rest shut, no numbers or text.

VIDEO PROMPT 1 OF 6

PICTURE — what Flow builds
A long corridor of identical closed doors receding into darkness, seen from one end. A lone figure begins walking it. Slow push-in.

NARRATION — generated inside this clip
"A corridor of one hundred doors, all closed. One hundred people are about to walk it, one after another."

Sound: Footsteps echoing down a corridor.

One tiny action only. If the clip drifts, cut to the verified still and use a slow zoom instead.

VIDEO PROMPT 2 OF 6

PICTURE — what Flow builds
Quick rhythmic passes: doors flipping open and shut in waves down the corridor as stylised figures stride past at intervals.

NARRATION — generated inside this clip
"The first opens every door. The second toggles every second door. The third, every third. Person one hundred touches only the last door."

Sound: A hundred soft door clicks in waves.

One tiny action only. If the clip drifts, cut to the verified still and use a slow zoom instead.

VIDEO PROMPT 3 OF 6

PICTURE — what Flow builds
One door — the twelfth — isolated in a pool of light while six soft markers appear beside it in a column (numbers drawn in editing). The corridor quiets around it.

NARRATION — generated inside this clip
"When the corridor finally rests, the open doors form a pattern so clean it feels like a message."

Sound: Six quiet taps beside one door.

One tiny action only. If the clip drifts, cut to the verified still and use a slow zoom instead.

VIDEO PROMPT 4 OF 6

PICTURE — what Flow builds
Freeze on the full corridor, every door still, perfectly quiet. Leave the lower third open for the pause.

NARRATION — generated inside this clip
"Which doors are open? Guess the pattern and lock it in the comments before the reveal."

Sound: Silence in the long corridor.

One tiny action only. If the clip drifts, cut to the verified still and use a slow zoom instead.

VIDEO PROMPT 5 OF 6

PICTURE — what Flow builds
Above a single door, pairs of plain tiles snap together two by two — then one door where a single tile folds onto itself, unpaired and glowing.

NARRATION — generated inside this clip
"Follow door twelve. It is touched by persons one, two, three, four, six and twelve — its divisors. Six touches. Even. Closed."

Sound: Tiles clicking in pairs, then one alone.

One tiny action only. If the clip drifts, cut to the verified still and use a slow zoom instead.

VIDEO PROMPT 6 OF 6

PICTURE — what Flow builds
The final corridor: exactly ten doors stand open, each glowing softly — positions one, four, nine and onward — while ninety stay shut in the dark.

NARRATION — generated inside this clip
"Only square numbers have an odd divisor — one that pairs with itself. Ten doors stand open. Follow for daily riddles."

Sound: A deep calm — ten doors breathing light.

One tiny action only. If the clip drifts, cut to the verified still and use a slow zoom instead.

AGENT MASTER PROMPT

Paste this whole prompt to the agent (Google Antigravity) with this book. It runs the video build end to end.

MASTER PROMPT

You are producing a 60-second vertical riddle video, 'THE HUNDRED DOORS'. Use the story, hints and reveal in this book as the script — do not invent a different answer. Step 1: generate the reference stills from the Reference Image Prompts page, in order, and check each against the Character & Style Lock. Step 2: build the six clips in Google Flow, one per Video Prompt page, using Frames-to-Video from the checked stills, one tiny action per clip, narration generated inside each clip using the locked voice. Step 3: assemble the clips in order 1-6, keep the question on screen until the reveal clip, captions in the series style, no dead air. Step 4: run the Edit Checklist page and fix every failure before export. Deliver a 1080x1920 MP4.

VOICE LOCK — one warm American male narrator, 30-35, calm and confident, slightly amused at the question beats, dead serious at the reveal. Same voice, same pace, every clip. The narration is generated INSIDE each Flow clip; listen-check every clip and regenerate only failures.

NARRATION SCRIPT

Six lines, about ten seconds each — sixty seconds in total. Record or generate them exactly as written.

LINE 1 · 0:00
"A corridor of one hundred doors, all closed. One hundred people are about to walk it, one after another."

LINE 2 · 0:10
"The first opens every door. The second toggles every second door. The third, every third. Person one hundred touches only the last door."

LINE 3 · 0:20
"When the corridor finally rests, the open doors form a pattern so clean it feels like a message."

LINE 4 · 0:30
"Which doors are open? Guess the pattern and lock it in the comments before the reveal."

LINE 5 · 0:40
"Follow door twelve. It is touched by persons one, two, three, four, six and twelve — its divisors. Six touches. Even. Closed."

LINE 6 · 0:50
"Only square numbers have an odd divisor — one that pairs with itself. Ten doors stand open. Follow for daily riddles."

VOICE LOCK — one warm American male narrator, 30-35, calm and confident, slightly amused at the question beats, dead serious at the reveal. Same voice, same pace, every clip. The narration is generated INSIDE each Flow clip; listen-check every clip and regenerate only failures.

THE THUMBNAIL

THE IDEA

The corridor with a scatter of glowing open doors at widening gaps. Edit-drawn text: 'ONLY 10 STAY OPEN'.

IMAGE PROMPT

Flat 2D storybook illustration, vertical 9:16: a long dark corridor of closed doors with a few doors standing open and glowing at widening intervals, deep navy palette, dramatic perspective, the top third left dark and empty for title text, no numbers or text in the image.

Rules: the question, never the answer. Three words or fewer of big text, drawn in editing — generated lettering garbles. Check it at profile-picture size before posting.

POSTING COPY

TITLE OPTIONS — pick one:

TITLE
100 Doors, 100 Passes — Only 10 Stay Open

TITLE
The Hundred Doors Puzzle (Perfect Squares)

TITLE
Which Doors Survive All 100 Toggles?

CAPTION — first line is the question
Person 1 opens every door, person 2 toggles every 2nd, person 3 every 3rd… up to 100. Which doors end open? Comment your pattern BEFORE the reveal. New riddle every day.

PINNED COMMENT
Your call BEFORE the reveal: how many doors stay open — and can you name even one of them?

Hashtags: #riddle #mathspuzzle #logicpuzzle #brainteaser #100doors #puzzle #dailypuzzle

EDIT CHECKLIST

Nothing posts until every line passes.

CHECK
Frame-check every beat: characters match the lock, no drift, no warped hands or faces.

CHECK
Every number and word on screen is drawn in editing and read back — generated text is never trusted.

CHECK
The question stays on screen until the reveal beat; the answer never appears early — not in a caption, not in a frame.

CHECK
Listen to the full cut: one voice throughout, no dead air, no clip where the narration went missing.

CHECK
The reveal lands in the final seconds; the last frame carries the follow prompt.

CHECK
Thumbnail checked small; title and caption lead with the question, never the answer.

AI — WHO DOES WHAT

Every step of this book's video, and whose job it is.

THE AGENT (Antigravity)
Reads this book, plans the shots, writes the generation queue, assembles the edit, runs the checklist.

GOOGLE FLOW
Generates the reference stills, then the six clips with the narration inside each clip.

THE EDITOR (you, or the agent)
Draws all on-screen text and numbers, sets captions, checks every frame and every second of audio.

THE CHANNEL
Posts with the title, caption and pinned comment from the Posting Copy page — question first, answer never.

Part 2 idea: Scale it up: 1,000 doors, 1,000 passes. The open count is the square root rounded down — 31 doors. Let the comments guess before the divisor proof returns.

ABOUT THIS BOOK

One riddle, taken seriously: a verified answer, a locked visual style, and the complete route from page to posted video — script, narration, image prompts, video prompts, thumbnail and posting copy, all in one pack.

OWNERSHIP
This book — its text, structure and design — is owned by OTT TITANS. Reading or downloading it grants you the right to enjoy it and to produce your own version of the riddle video on your own channels. It never transfers ownership of the book.

The riddle itself is a classic that has travelled for years. This pack — its words, structure and production system — is the original work.

CASE CLOSED

The ten perfect-square doors: 1, 4, 9, 16, 25, 36, 49, 64, 81 and 100.

A new riddle lands every day. Solve the next one before the reveal.

— END OF BOOK —
